

ROUND ____ — Sabine

(Phase 1: Ricardo)

Labor endowment: **100** workers — Productivity: cloth = 1.0/worker, wine = 1.5/worker

Production — allocate your labor (must sum to **100**):

- Cloth: _____ workers
- Wine: _____ workers

Tariffs (0–100%, on imports, per partner per good):

- from **Bosque**: cloth: _____% wine: _____%
- from **Llano**: cloth: _____% wine: _____%
- from **Trinity**: cloth: _____% wine: _____%

Compensation — buy off the groups trade displaced, instead of taxing imports:

- This round we compensate: _____% of our consumption (0–25%)
- Side payment to another country: _____ units of _____ to _____.

Compensating 10% buys about +2.5 approval a round and costs 2% of your welfare — roughly what a 20% tariff buys, for less, and your trade stays open. A side payment does the same for whoever receives it (only the net counts).

Trade offers (negotiate first, then commit):

- We give _____ units of _____ to _____;
in return: _____ units of _____.
- We give _____ units of _____ to _____;
in return: _____ units of _____.
- We give _____ units of _____ to _____;
in return: _____ units of _____.

(Use the back of the sheet for more offers.)

ROUND ____ — Bosque

(Phase 1: Ricardo)

Labor endowment: **60** workers — Productivity: cloth = 4.0/worker, wine = 1.0/worker

Production — allocate your labor (must sum to **60**):

- Cloth: _____ workers
- Wine: _____ workers

Tariffs (0–100%, on imports, per partner per good):

- from **Sabine**: cloth: _____% wine: _____%
- from **Llano**: cloth: _____% wine: _____%
- from **Trinity**: cloth: _____% wine: _____%

Compensation — buy off the groups trade displaced, instead of taxing imports:

- This round we compensate: _____% of our consumption (0–25%)
- Side payment to another country: _____ units of _____ to _____.

Compensating 10% buys about +2.5 approval a round and costs 2% of your welfare — roughly what a 20% tariff buys, for less, and your trade stays open. A side payment does the same for whoever receives it (only the net counts).

Trade offers (negotiate first, then commit):
