MNC Decision Form (Phase 3+)

You own this firm — alone or with a partner — even though it sits in another country. Each round: choose how much to produce (*scale*), whether to *relocate* to a new host, and (Phase 4+) whether to pay the fixed cost to *export*. It can move anywhere except your own country. Productivity tiers: HIGH 1.3, MED 1.0, LOW 0.7.

ROUND _____ — FIRM F1: Cloth-A Owner(s): _____

Industry: **cloth** Productivity: **1.3** Starting host: **Bosque**
Price per unit sold: **1.00** Unit cost: **0.60** Max scale: **40** Export fixed cost: **8**

SCALE (0–40): _____ RELOCATE TO: _____ *(blank = stay)*
Relocate anywhere except your own country — no re-shoring.

EXPORT this round? ☐ Yes ☐ No *(Phase 4+; pays the fixed cost)*

Hand in the slip above; keep this half.

How the numbers work — a worked example at scale 23

Scale 23 is an illustration, not a recommendation. Redo the table at the scale you actually choose.

	Stay home	**Export** (premium 25%)
Units made: scale × productivity	23 × 1.3 = 29.9	29.9
Revenue: units × price	29.9 × 1.00 = 29.90	29.90 × 1.25 = 37.38
Production cost: scale × unit cost	23 × 0.60 = 13.80	13.80
Export fixed cost	—	8.00
Profit	**16.10**	**15.58**

Verdict: at scale 23, exporting **loses 0.52**: the extra revenue (7.48) does not cover the fixed cost (8.00). Stay home.

- **The rule:** export only if units × price × premium > the fixed export cost. The fixed cost is the same whether you ship 5 units or 50, so exporting needs volume.
- **The premium** is on the board each round. 25% is the most it can be; tariffs other countries put on your good from your host shrink it.
- **Your local sales** — 20% of your units — count toward your *host's* welfare, export or not; the rest sells on world markets. **Your profit** counts every unit, and it is yours alone.
- **Your host's MNC tax** takes its % of your revenue (premium included), so a lower-tax host keeps more of your profit — but moving means producing nothing that round. From Phase 5 your profit is worth what your host's currency is worth, unless you export: exports are paid in world prices.

MNC Decision Form (Phase 3+)

You own this firm — alone or with a partner — even though it sits in another country. Each round: choose how much to produce (*scale*), whether to *relocate* to a new host, and (Phase 4+) whether to pay the fixed cost to *export*. It can move anywhere except your own country. Productivity tiers: HIGH 1.3, MED 1.0, LOW 0.7.

ROUND _____ — FIRM F3: Cloth-C Owner(s): _____

Industry: **cloth** Productivity: **0.7** Starting host: **Sabine**
Price per unit sold: **1.00** Unit cost: **0.60** Max scale: **40** Export fixed cost: **8**

SCALE (0–40): _____ RELOCATE TO: _____ *(blank = stay)*
Relocate anywhere except your own country — no re-shoring.

EXPORT this round? ☐ Yes ☐ No *(Phase 4+; pays the fixed cost)*

Hand in the slip above; keep this half.

How the numbers work — a worked example at scale 23

Scale 23 is an illustration, not a recommendation. Redo the table at the scale you actually choose.

	Stay home	**Export** (premium 25%)
Units made: scale × productivity	23 × 0.7 = 16.1	16.1
Revenue: units × price	16.1 × 1.00 = 16.10	16.10 × 1.25 = 20.13
Production cost: scale × unit cost	23 × 0.60 = 13.80	13.80
Export fixed cost	—	8.00
Profit	**2.30**	**-1.67**

Verdict: at scale 23, exporting **loses 3.97**: the extra revenue (4.03) does not cover the fixed cost (8.00). Stay home.

- **The rule:** export only if units × price × premium > the fixed export cost. The fixed cost is the same whether you ship 5 units or 50, so exporting needs volume.
- **The premium** is on the board each round. 25% is the most it can be; tariffs other countries put on your good from your host shrink it.
