ROUND ____ — Sabine (Finance & institutions add-on)

Attach this to your trade form once the relevant phase opens.

Money (Phase 5+) *one box in each row*

- Exchange rate: ☐ Peg ☐ Float
- Capital account: ☐ Open ☐ Controls
- Money growth: ☐ −2% ☐ 0% ☐ 2% ☐ 5% ☐ 10% *(0% = follow the anchor)*

Peg No currency friction on trades with other pegged currencies; other cross-currency trades lose 2%. Trades with the reserve country are always friction-free. An open peg is what speculators attack. A peg is tied to the reserve currency and moves with it: when the reserve country prints, tightens, or its currency crashes, yours moves the same way.

Controls Foreign firms in your country produce 15% less, and (Phase 6) you cannot borrow abroad. Speculators cannot run on a closed account.

Printing +1% welfare this round for each point printed, times your FX index. Your FX index falls by the same % for good. A weak currency shrinks every import you receive by half the drop, and costs 1% of welfare every round for each 10 points below 1.00 (FX 0.90 → imports −5%, welfare −1%).

Tightening −2%: your FX index rises 2% for good (it can pass 1.00), and welfare falls 2% this round.

Sovereign debt (Phase 6+)

- Borrow this round: _____ Repay this round: _____
- Default on the debt? ☐ Yes ☐ No

Borrow Up to 25% of your consumption a round; welfare rises by the same share this round. Not under capital controls.

Interest 5% + 15% × (debt ÷ consumption), every round. Debt is owed in the reserve currency, so what counts is your currency against it: payments are divided by (your FX index ÷ the reserve's). Yours at 0.70 while the reserve's holds at 1.00 → 43% heavier. A peg falls with the reserve, so its debt gets no heavier; if the reserve falls and yours holds, your debt gets lighter.

Default The debt disappears, but welfare falls by 1.25 × (debt ÷ consumption) that round — more than repaying would cost at par; no borrowing for 2 rounds and +5% friction on your trades meanwhile. It only pays after a big fall in your currency against the reserve's.

Last round Everything still owed is repaid.

Institutions & power (Phase 7+)

- Join / remain in the WTO? ☐ Yes ☐ No
- Bound tariff commitments (good: ceiling): _____
- *Hegemon only:* provide the public good this round? ☐ Yes ☐ No

ROUND ____ — Bosque (Finance & institutions add-on)

Attach this to your trade form once the relevant phase opens.

Money (Phase 5+) *one box in each row*

- Exchange rate: ☐ Peg ☐ Float
- Capital account: ☐ Open ☐ Controls
- Money growth: ☐ −2% ☐ 0% ☐ 2% ☐ 5% ☐ 10% *(0% = follow the anchor)*
