

Submitting your round from a laptop

The class page: <https://joshuaalley.github.io/ipe-simulation/> One person per team submits.

1. **Tap the phase** (it's on the board), then **your country**.
2. **Production.** Type where your workers and capital go. Green ticks mean everything is placed; the page won't let you submit until it is.
3. **What your team decided.** Tariffs on your imports, the trades you agreed, compensation, and from Phase 3 your MNC tax (blank keeps last round's). Money, debt and WTO choices appear once those phases start.
4. **Submit.** The page saves a small file (`Bosque.json`) and opens the class Dropbox page. **Drop the file in.** That's it.

Good to know

- **Trades need both sides.** List every swap you agreed. Your partner must list the same swap on the same terms, or it doesn't happen.
- **Changed your mind?** Submit again. The newest file counts.
- **Firm owners:** tap *A firm I own*, pick your firm, and set scale, move and export. Submit only when something changes; otherwise your firm keeps doing what it did.
- **No file?** Your country repeats last round's production, tariffs and compensation, with no trades.
- **No laptop?** Hand in the paper form as before.
